

Invitation to NETM Sustainability Workshop

The Western Parkland City Authority invites industry members to learn more about the New Education and Training Model's (NETM) four-year pilot.

This is your opportunity to take part in the design and development of short courses tailored to the needs of industry that will be funded by the NETM and free for your staff to enrol in over the course of the pilot.

We are looking for industry representatives who are interested in running a sustainable business or building the future workforce for a sustainable Western Parkland City to take part in our interactive workshop.

Participants will:

- help us identify skills and training needs in sustainability for priority industries of the Western Parkland City
- contribute to a brainstorming session to develop ideas for future short courses.

The sustainability workshop will cover the following topics:

- integrating circular economy principles into businesses
- sustainable education including water and organic waste, and towards ending plastic waste
- clean energy: renewables integration, energy efficiency, carbon neutrality and net zero emissions

Refreshments will be provided with an opportunity for networking.

This workshop is limited to 20 participants, and places will be filled on a first come, first served basis, so please register today.

Location: Parramatta, NSW (exact location TBC)

Date: 5 December 2022

Time: 9am to 12pm

Cost: FREE

Registration: [Email netm@wpcasidney.com.au](mailto:netm@wpcasidney.com.au) to RSVP

About the New Education and Training Model

The Western Parkland City is a growing centre for innovation and advanced manufacturing, and the skills needed to fill new jobs are changing. That's why we're developing a New Education and Training Model (NETM) in partnership with industry, universities, vocational education and training (VET) providers and government.

The NETM develops and delivers short courses (micro-credentials) to rapidly upskill Western Parkland City's workforce to attract industry investments and support employment opportunities in priority industries including advanced manufacturing, aerospace and defence, freight and logistics, pharmaceutical manufacturing and agribusiness.

For employers, this means access to an agile and highly skilled workforce that can meet the demands of advancing operations.

Training is unaccredited and supplements existing training by focusing on areas of emerging technologies, techniques or skills that are not addressed by existing training.
